

# Centercode Releases Connect January 2006

New release offers centralized E-mail Logging and additional functionality

LAGUNA HILLS, CA., (January, 2006) -- Continuing to deliver the most robust software offering possible, Centercode, Inc., a leading provider of beta test management software, services and solutions, today announced a new release of their proprietary beta test management software, Connect™.

The December/January release includes the much anticipated major feature of Centralized and User-Based E-Mail Logging as well as a number of smaller features including Project Quick Jump, View and Filter Additions, and a great deal of feature enhancements for many areas throughout Connect.

A major new feature of Connect is Centralized E-mail logging which offers Community and Project managers the ability to easily monitor E-mail both sent and received. In addition, this new feature enables test managers the ability to perform useful actions such as filtering E-mail, resending it, forwarding it, and removing it from the log.

Several smaller new features have also been released in the latest version of Connect. User-based E-mail logging allows Community and Project Managers to view all E-mail sent from Connect to an individual user. This E-mail is automatically separated by types, and allows for actions similar to those found in the centralized E-mail logs including Resend, Forward, and Remove.

The Project Quick Jump functionality allows Project Members to quickly jump between projects from a simple drop-down list box located in the top right of their screen. Another new feature is Yes/No Notices, which may now be Filtered and Viewed throughout Community, Department, and Project scopes. These are available in all areas Filters and/or Views are utilized, including Reporting, Recruiting, and User Macros.

Lastly, Community Notices may now be filtered at Project level Filters and Views. This functionality offers Project Managers additional options for recruiting, managing, and monitoring users.
