

# Centercode Releases Connect April 2006

New release focuses on end-user improvements.

LAGUNA HILLS, CA., (April 2006) -- Intended to enhance the end-user's experience, Centercode, Inc., a leading provider of beta test management software, services and solutions, today announced the release of a new version of their proprietary beta test management software, Connect™.

The April Connect update offers a collection of features surrounding User Forums and File Distribution. These features are designed to enhance the end-user's experience by offering them both a simpler User Forum participation as well as the ability to use Download Managers and resume failed downloads. For project managers, this release offers the ability to determine security settings for each file being distributed from Content or Versions, as well as quickly moderate User Forums using the NNTP client of their choice.

## **1. NNTP Based Forum Access**

NNTP Forum access is a frequently requested feature which offers an entirely new interface for interacting with Project User Forums. The NNTP standard has existed on the Internet for many years and is preferred by many users as it offers them personal choice in the selection of the client they wish to utilize for forum participation.

## **2. E-Mail Based Topic Posting**

Users may now post new User Forum Topics via standard e-mail. This is accomplished using a simple Tag-based system which allows Project Managers to associate a textual tag with each forum they create.

## **3. Individual Forum Thread Subscriptions**

Users may now elect to subscribe to individual forum threads. All replies to these threads will be e-mailed directly to the user, enabling the user to stay up-to-date on only the topics that interest or relate directly to them.

## **4. Advanced File Distribution**

Project Managers choosing to distribute files may now select from 4 unique security options. Each option has various unique benefits, each clearly visible upon selection.
